

UCLA-CDU CFAR Clinical Science Core Clinical Discovery Seminar

uTECH: Developing a Novel Machine-Learning HIV Prevention Intervention for Sexual and Gender Minority Young People Who Have Sex with Men

Ian Holloway, PhD, LCSW

Professor of Social Welfare

Director, Hub for Health Intervention, Policy and Practice

Editor-in-Chief, Sexuality Research and Social Policy

UCLA Luskin School of Public Affairs

Clinical Discovery Seminar Objectives

- Create a community of clinical, behavioral, and translational HIV researchers at UCTA and CDA and beyond
- Share innovative work by CFAR investigators utilizing HIV and other funded data and sample repositories
- Introduce investigators to opportunities to propose new work/projects using existing data and sample repositories
- Stimulate new ideas and collaboration
- Support investigators in proposing analyses to these cohorts

Upcoming Clinical Science Core Events

- • **UCLA-CDU Center for AIDS Research (CFAR) Open House**
 - Thursday, May 2, 2024, from 12:00-1:00 pm via Zoom
 - Register here:

- To access past seminars/workshops and learn about future events, please visit our website:
<https://cfar.ucla-cdu.org/cores/clinical-science-core/>

Core Contact Information:

Core Director – Kara Chew, MD, MS

Core Program Manager – Stephanie Buchbinder, MPH

Ian Holloway, PhD, LCSW, MPH
Professor, Department of Social Welfare

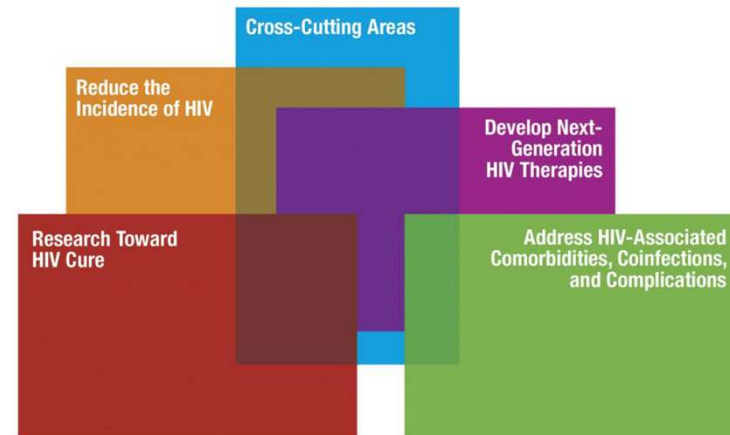

Agenda

- I. Strategic Plan and Priorities**
- II. Background: HIV & Substance Use**
- III. Background: Machine Learning for HIV Prevention**
- IV. uTECH Project Overview**
- V. Phase 1 Methods & Data**
- VI. Phase 2 Methods & Data**
- VII. Implications, Challenges, & Opportunities**
- VIII. Collaborations & Acknowledgements**

NIDA Strategic Plan & OAR Priorities

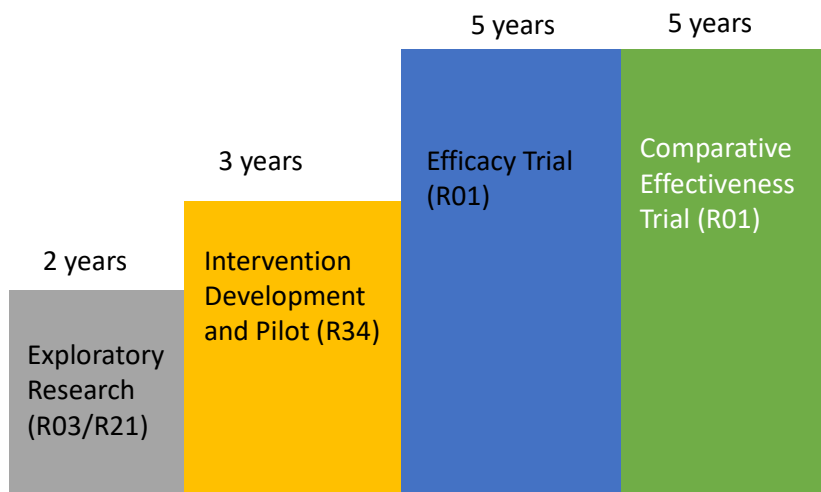

NIH Priorities for HIV and HIV-Related Research

“Explore the potential of technology-based methods for delivering prevention interventions, such as smartphones, video games, and social media”

Traditional

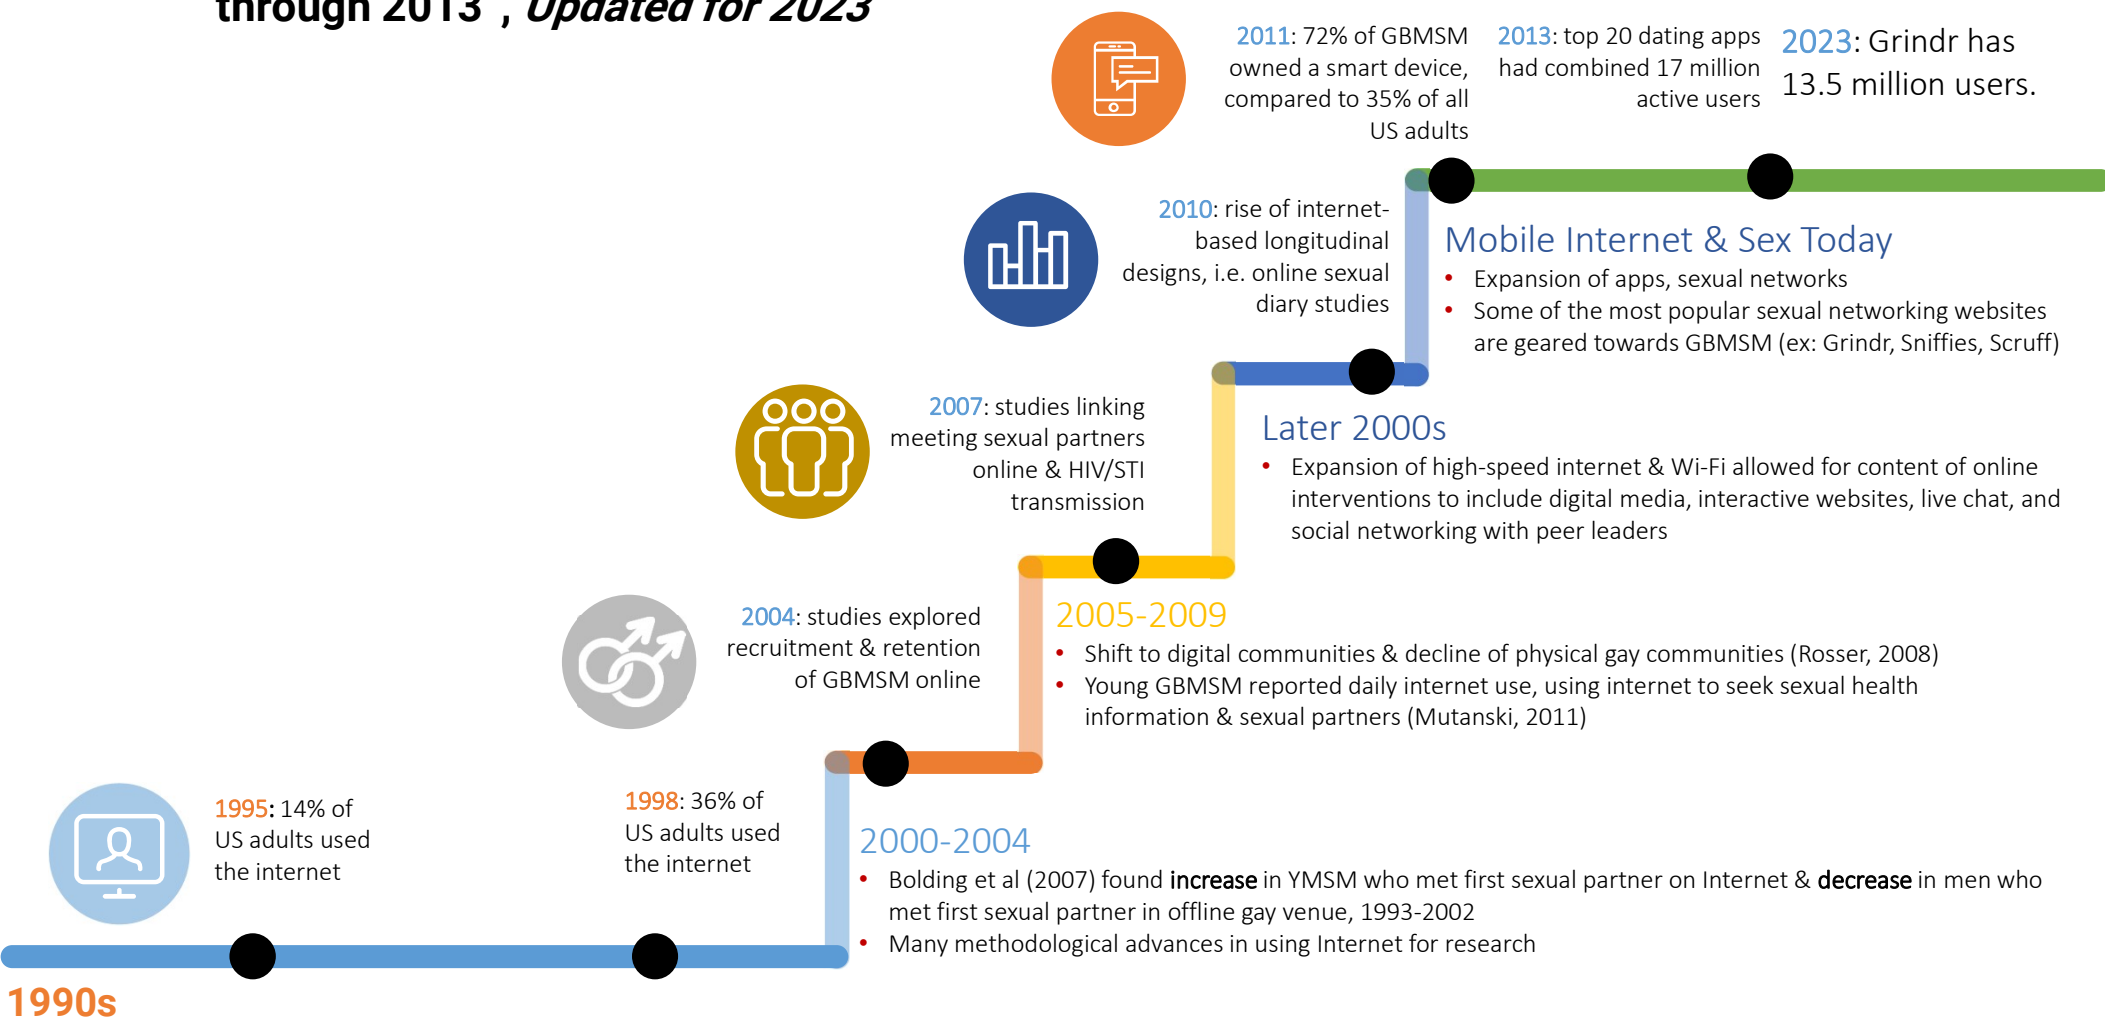

Transformative

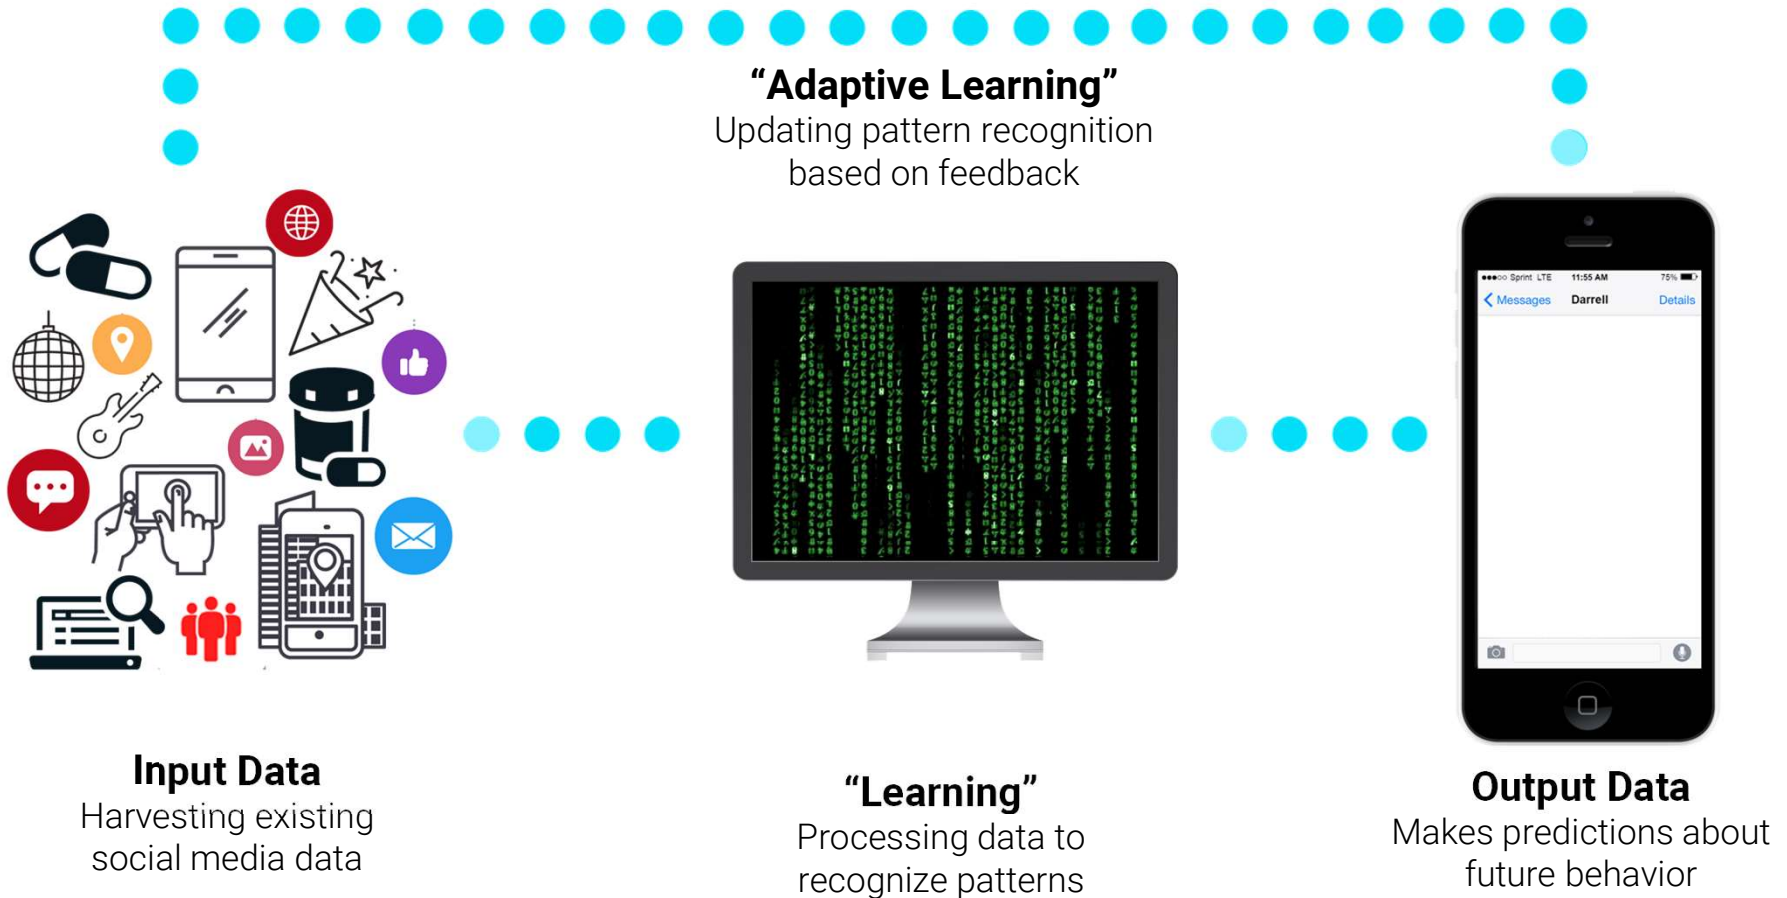

Examining feasibility, appropriateness and acceptability much earlier in the implementation science pipeline

Grov et al 2014 “Gay & Bisexual Men’s Use of the Internet: Research from 1990s through 2013”, *Updated for 2023*

uTECH Project Overview

uTECH Project: Phase 1

Purpose: Conduct qualitative interviews with GBMSM using an iterative user-centered design process, which will result in a refined version of the uTECH intervention

uTECH Phase 1 Methods

Recruitment

- **Advertisements** placed in Los Angeles County venues (i.e., flyers in community-based organizations) frequented by GBMSM
- **Social media**

N=30

Baseline Interview

- **60-90 min survey** on sexual & HIV/STI behaviors, substance use, and preferred SNS platforms
- **Qualitative interview** on dating risks, safety, and app features
- **App installation**

6-month interview

- **30 min interview** on app functionality and reflection on current data collected (word clouds)

Phase 1 Participant Demographics (n=29)

Top online platforms to meet others for sex and partying:

Baseline Information: Technology Preferences to receive uTECH intervention

Mobile functions participants feel comfortable in providing access to uTECH reseachers

6-Month Interviews: Review of collected data

- Participants are asked to review the data collected from their mobile phones in the last 6 months:

uTECH Data Mining Library

302

text phrases and 21 special characters (emojis)

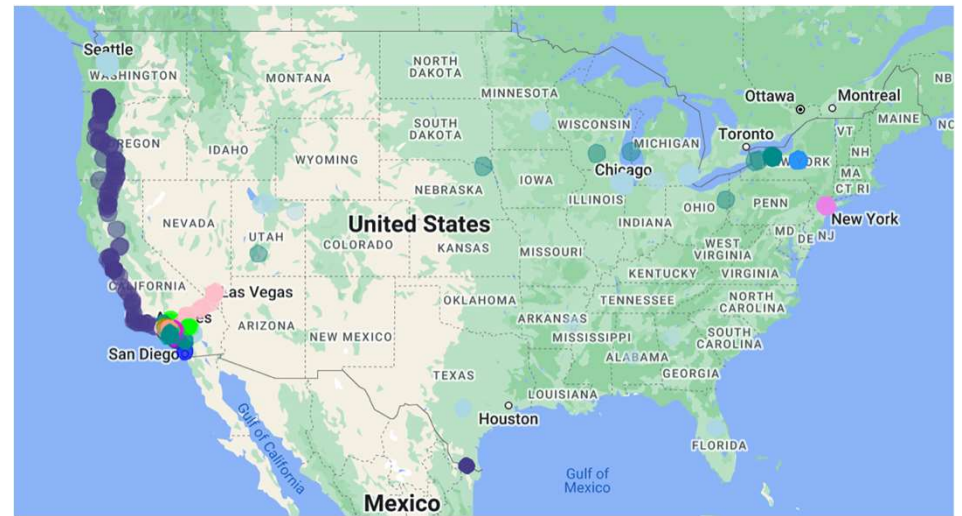

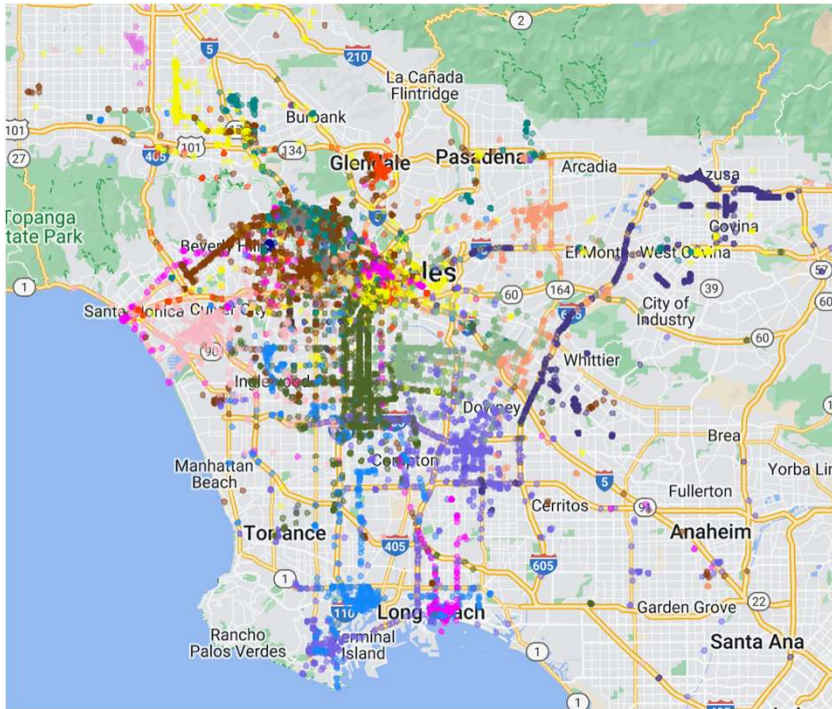

6-Month Interviews: Revised Risky Words Dictionary

Category ranking	Risk level		
	3	2	1
Substance Use and Sex		"Party and play", "smoke and stroke", "pnp", "party", "partying"	"sharing"
Condomless sex	"BB", "bb", "Bareback", "bare", "cum dump", "pump and dump", "raw", "seed", "seeding", "creampie"	"loads", "loadz", "cum", "jizz", "Pussy", "bussy", "hole", "hole emoji", "raunchy", "pig", "piggy"	
Sex work			"\$", "roses", "generous", "pro", "GEN", "G E N"
Group sex	"sex party", "gang bang", "orgy"	"3some", "3way", "bukake"	
Anal intercourse		"pound", "power top", "power bottom"	"top", "bottom", "BTM", "fuck", "anal", "vers", "versatile", "sex", "butt sex", , "DTF", "topped"

Sex-related words: Word Cloud

GPS Visualization – Phase 1

uTECH Phase 1: Predicting Risk Score

- Risk score predicted for iOS and Android users who have at least 30 days of social media data
- Model uses a list of risky words and how frequently our participants use them
 - i.e., What percentage of days include these words or phrases
- Model used linear regression

Methamphetamine Use

- Methamphetamine use can be determined from text data with 93% accuracy
 - Precision 0.95, Recall 0.90
 - Using a simple logistic regression model after TFIDF transformation

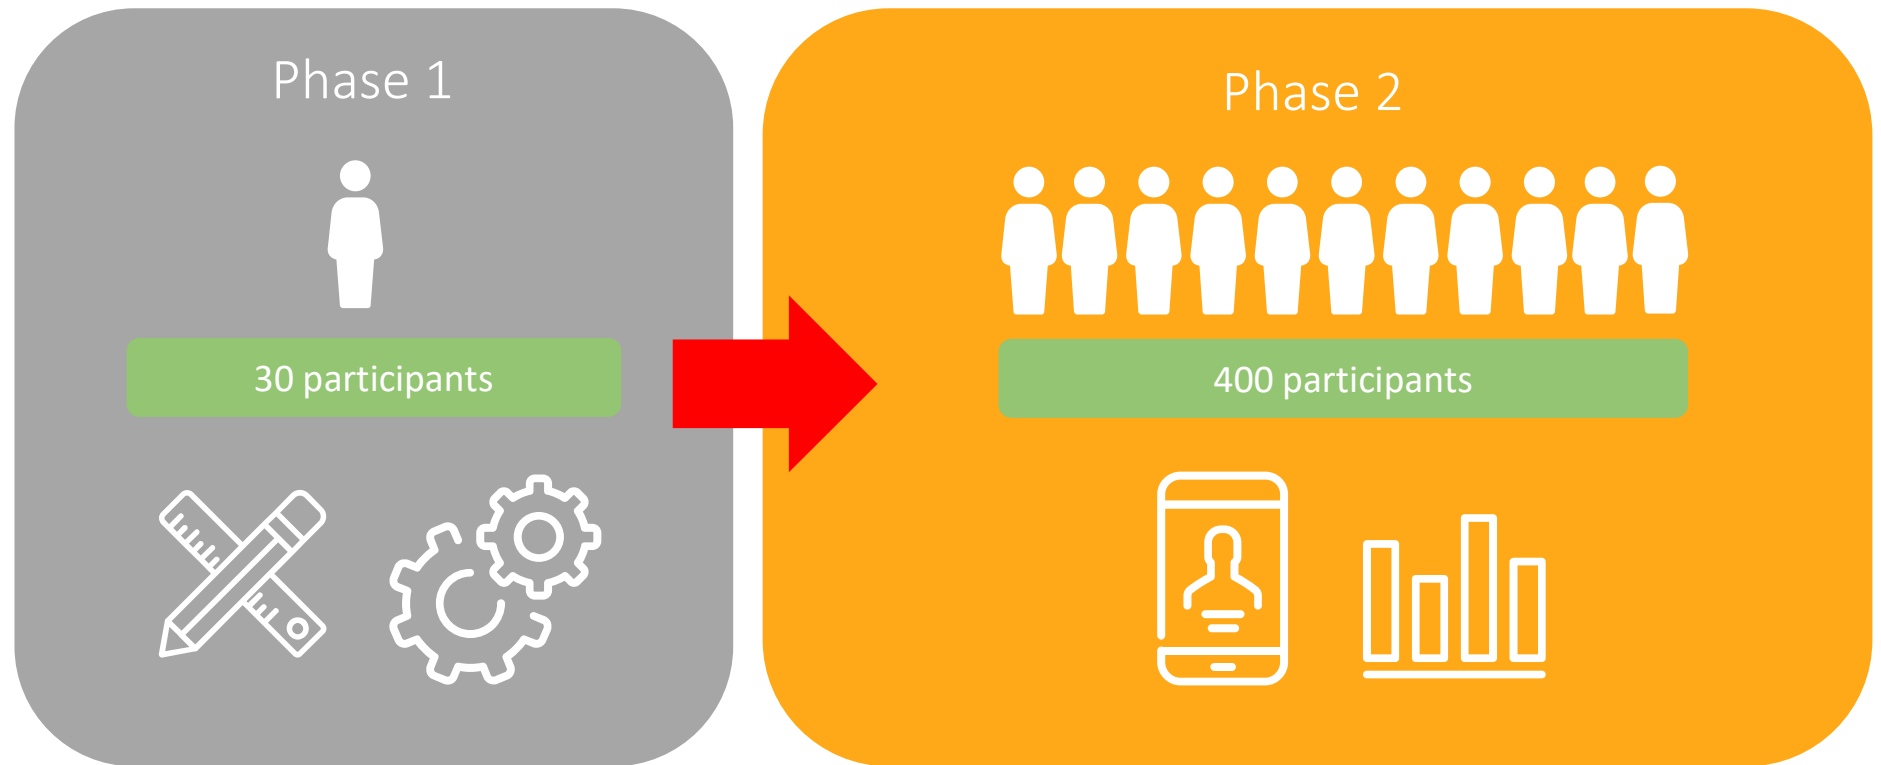

Injection Drug Use

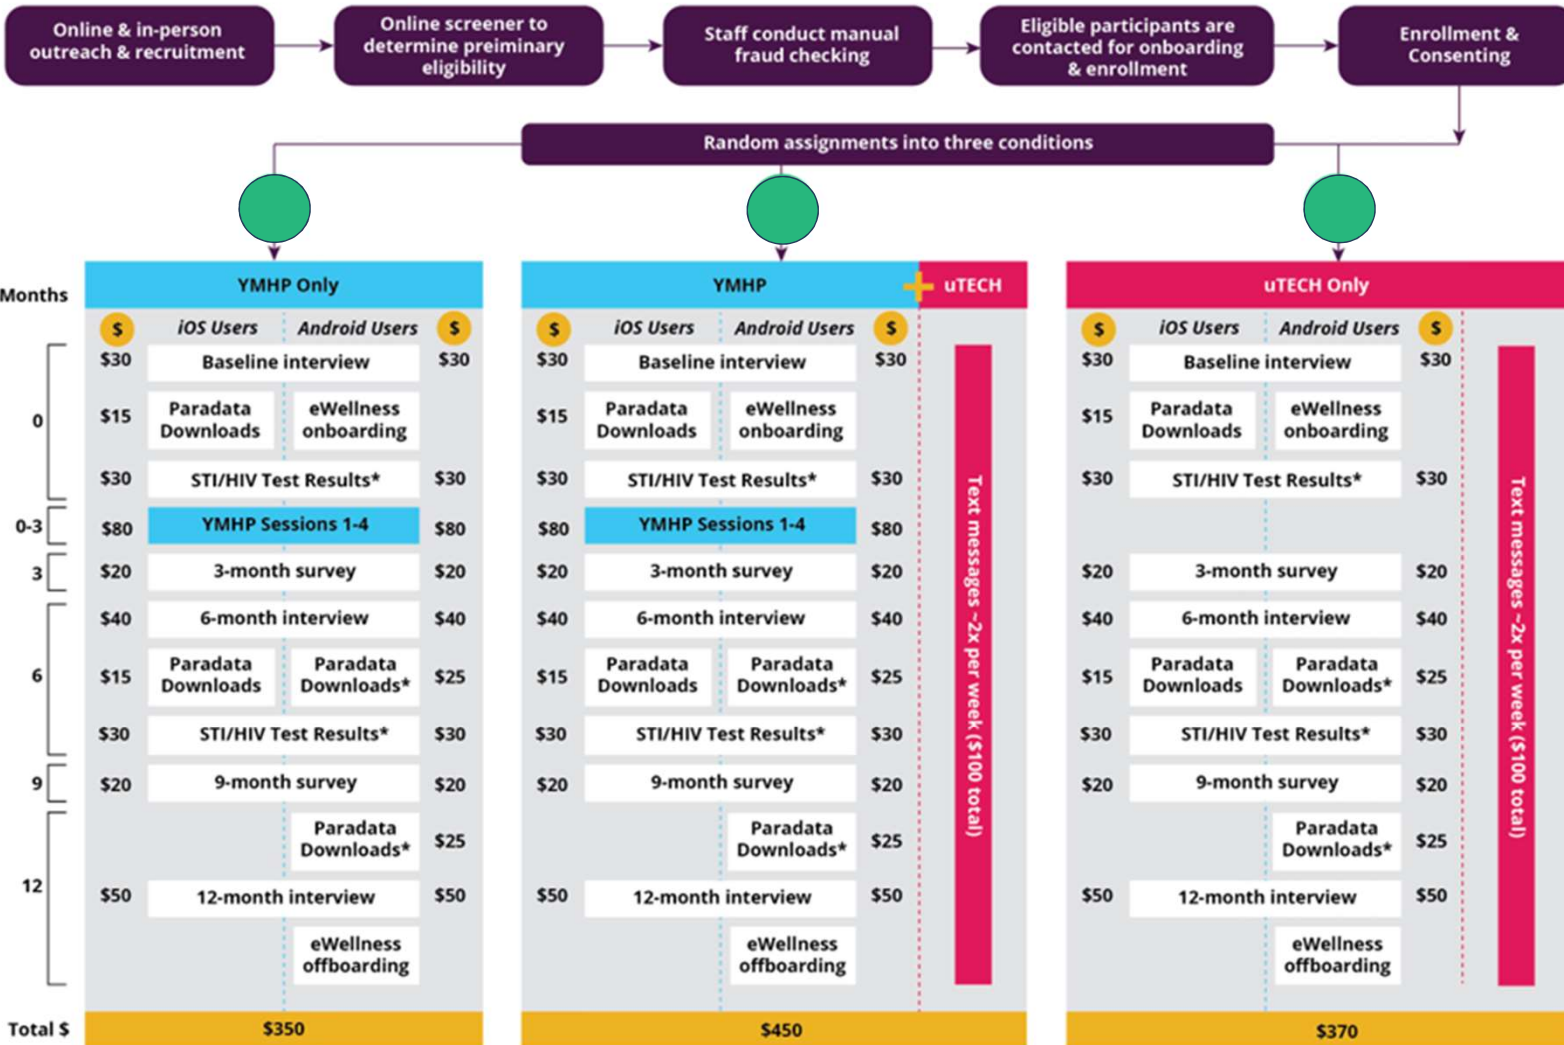

- Injectable drugs are more difficult to detect
 - 89% accuracy
 - 0.67 precision, 0.57 recall
 - Using gradient boosting classifier
- Small number of positive participants makes task more challenging
 - Individuals might use different words/phrases

Assessing feasibility, accessibility and appropriateness

Phase 2 Methods

* Optional

uTECH “Push Notification”

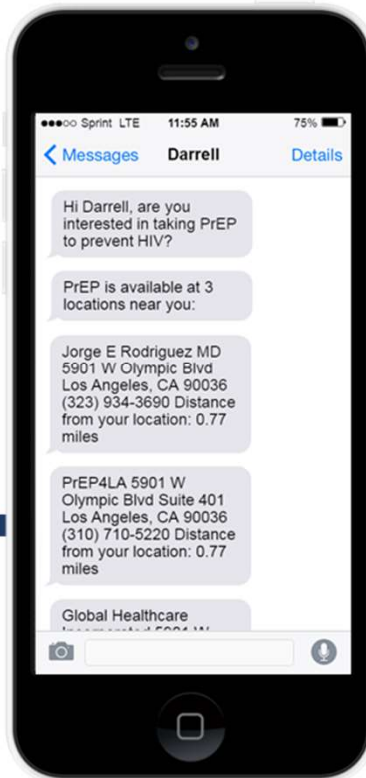

Case #1

Darrell

- 20 year old, African American man
- Parties on the weekends
- Uses methamphetamine and GHB
- Often isn't able to successfully negotiate condom use

2. Machine pushes
a tailored prevention message

1. Machine detects

he has or is approaching a risk event

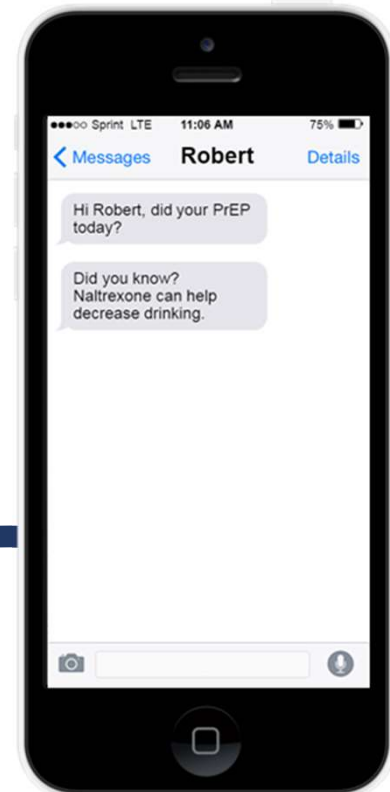

Case #2

Robert

- 35 year old, white man
- PrEP user with inconsistent adherence
- Abuses alcohol

2. Machine pushes
tailored prevention messages

1. Machine leverages known information

uTECH Examples: PrEP & Harm Reduction

	PrEP Initiation	Substance Use Harm Reduction
Informational	<p>PrEP reduces the risk of getting HIV from sex by about 99% - if taken on an ongoing basis before sex and continued after sex. It's also called Truvada or Descovy. See where you can get it near you: https://prelocator.org/.</p>	<p>Here's a tip for staying hydrated while drinking: drink one glass of water for every alcoholic beverage you have. This is known as the 1-for-1 rule and may help moderate your drinking and lessen chance of hangover.</p>
Motivational	<p>Did you know that studies show taking PrEP lowers HIV-related anxiety? Are you less anxious about HIV when you're on PrEP?</p>	<p>If you ever inject with a friend, you could consider doing so at a safe injection site (SIS). SIS refers to places where people who use injectable, but illegal, opioids such as heroin, can do so without fear of overdose, prosecution or spreading disease. You can try looking up sites in your area to find them or contact a member of the research team for assistance.</p>
Behavioral	<p>Reply with the number of the statement that applies to you:</p> <ol style="list-style-type: none"> 1. I have talked to a medical provider about getting PrEP but have not yet started taking it. 2. I already have talked to a medical provider about getting PrEP and have begun taking it. 3. I haven't talked to a medical provider about getting PrEP and haven't taken it yet. 	<p>Reply with the number of the statement that applies to you: Have you ever trusted someone to supervise you (or trip-sit) as you inject for safety purposes?</p> <ol style="list-style-type: none"> 1. Yes, always. 2. Yes, but only once/a few times. 3. Yes, but I would not do it again. 4. No, but I would like to in the future. 5. No, I don't feel comfortable being supervised.

uTECH Phase 2: Recruitment, Enrollment, Data Collection

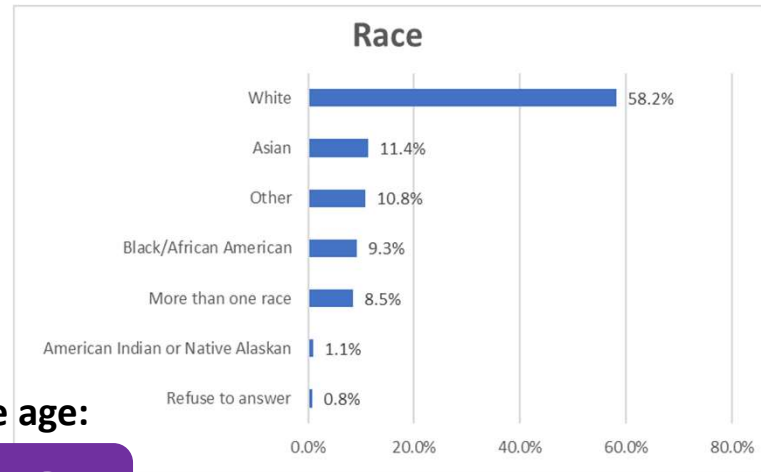

Data Collected

uTECH Phase 2: YMHP (n=342)

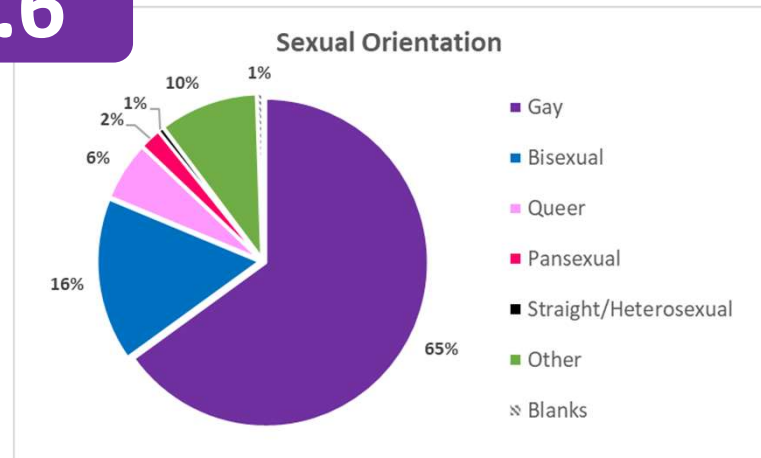

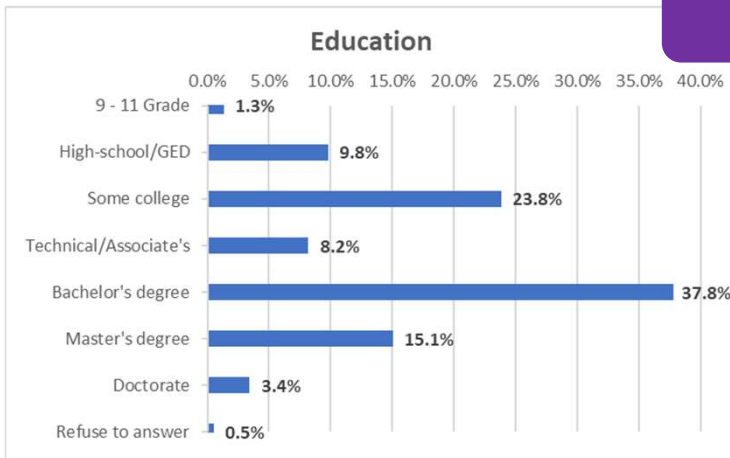

Session	Complete (n)	Complete (%)
YMHP1	288	84%
YMHP2	268	78%
YMHP3	254	74%
YMHP4	239	70%

Phase 2 Baseline: Participant Demographics (n=378)

Average age:

24.6

Phase 2: Measures

Primary Measures:

Feasibility

Acceptability

Appropriateness

of uTECH text messages

Secondary Measures:

Methamphetamine Use

PrEP & PEP Use

Injection Drug Use

Intimate Partner Violence

Vaccination

Stigma

Hook-up App Use

Phase 2 Baseline: PrEP/PEP Use

PrEP Use
(n=378):

188 (50%)

Used PEP in =< 6
months prior to
baseline (n=378):

12 (3%)

PrEP Adherence (n=188)

Phase 2 Baseline: PrEP Stigma

PrEP Stigma (n=295) “People experience negative judgement because they take PrEP”

“My family would be supportive of me taking PrEP”

25% disagree

“People taking PrEP would be seen by others as slutty”

41% agree

“People experience negative judgement because they take PrEP”

35% agree

Phase 2 Baseline: Secondary Measures

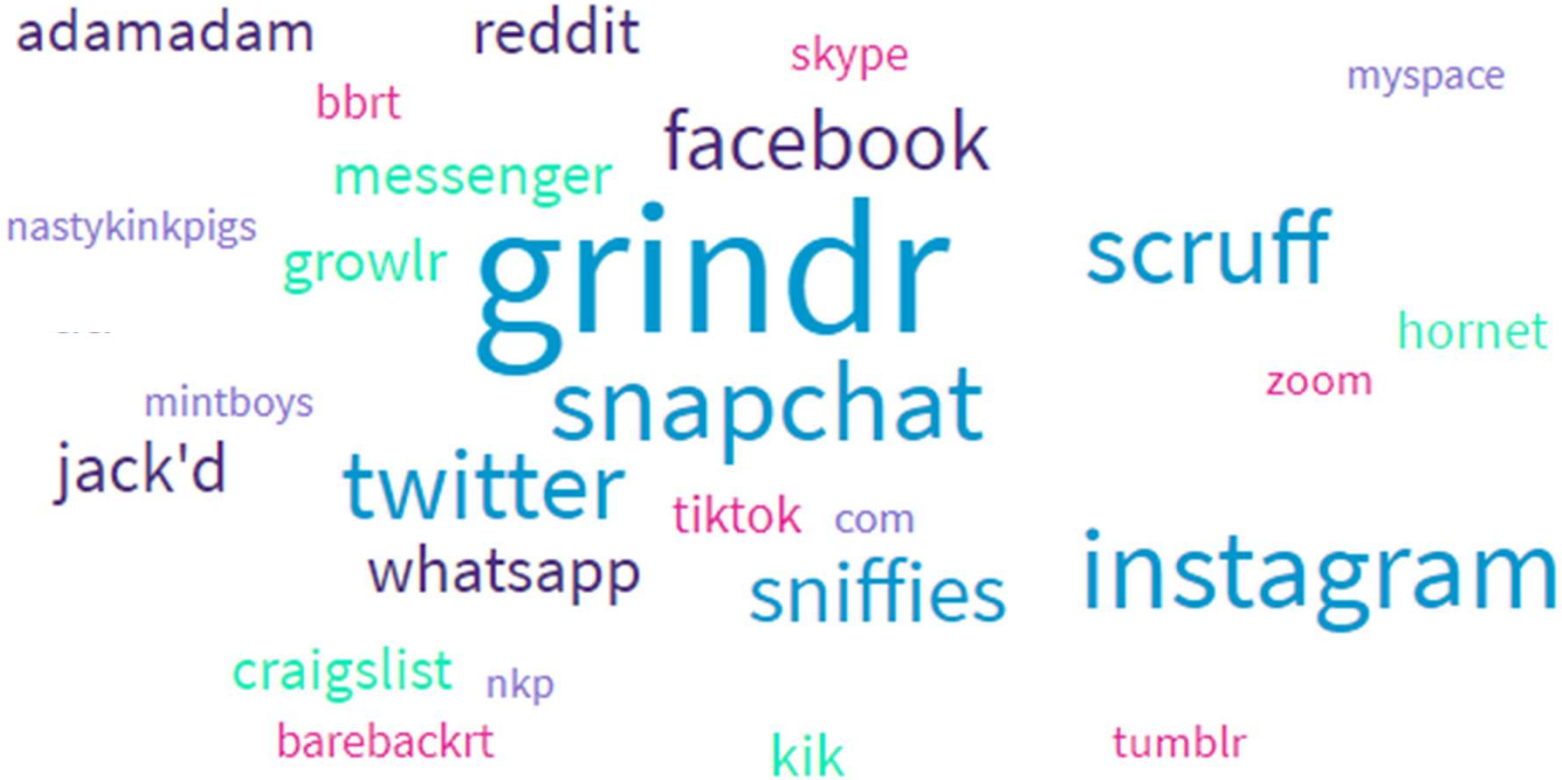

Meth use =< 6 months since baseline (n=378)

Any	38	10%
None	340	90%

Injection drug use =< 6 months since baseline (n=378)

Any	14	4%
None	364	96%

Phase 2 Baseline: Most popular dating/social media apps

GPS Visualization – Phase 2

Implications & Future Directions

- Real time data monitoring is possible with participant consent
- Intimate partner violence is emerging as a risk factor for substance use and HIV risk
- Ideas for future directions:
 - 12-step program with integrated data monitoring by sponsor

Collaborations

**Qualitative Analysis of
Online Behavior**

Raiza Beltran
University of
Minnesota

**MPX data mining
project**

Corey Cascalheira
New Mexico State
University

**IPV data mining
project**

Chenglin Hong
UConn School of
Social Work

Opportunities for Collaboration

Data Topics	Data Type	Data collection points
YMHP – Confidence, Commitment, Readiness	Qualitative	One time
Feedback received on informational, motivational, behavioral text messages	Qualitative	Twice weekly for 12 months
Sexual risk behavior	Survey	Baseline, 3-month, 6-month, 9-month, 12-month
Intimate Partner Violence	Survey	Baseline, 3-month, 6-month, 9-month, 12-month
STIs	Survey	Baseline, 3-month, 6-month, 9-month, 12-month
Substance Use	Survey	Baseline, 3-month, 6-month, 9-month, 12-month
Substance & Sex Seeking via Social Networking	Survey	Baseline, 3-month, 6-month, 9-month, 12-month
Mpox attitudes, behaviors, and vaccination status	Survey	Baseline, 3-month, 6-month, 9-month, 12-month
COVID-19 attitudes, behaviors, and vaccination status	Survey	Baseline, 6-month, 12-month
Geolocation data (Android)	App	Continuous over 12 months
Keyboard tracking data (Android)	App	Continuous over 12 months

Acknowledgments
